ProjectName	To supply leftover food to poor
MaximumMarks	2 marks

ProblemSolutionFitTemplate:

Every day, large amounts of perfectly edible food from homes, restaurants, and events are wasted, while many poor and homeless people struggle with hunger. The main problem is the lack of an organized, safe, and quick way to collect and distribute surplus food. The solution is to create a coordinated food redistribution system—through a mobile app or community network—that connects food donors with nearby NGOs and volunteers. This system would ensure safe collection, storage, and delivery of leftover food to those in need, reducing food waste and hunger simultaneously. By turning surplus into sustenance, the initiative creates social, environmental, and humanitarian impact.

Purpose:

The purpose of supplying leftover food to the poor is to reduce food waste and fight hunger by redistributing surplus, safe-to-eat food from homes, restaurants, and events to people in need. This initiative aims to create a sustainable system that saves resources, promotes social responsibility, and ensures that no one goes hungry while edible food goes to waste.
